

PEDAGOGICAL STRATEGIES FOR DEVELOPMENT OF COGNITIVE SKILLS IN A DIGITAL ENVIRONMENT

Todorka Terzieva, Olga Rahneva, Ventsislav Dilyanov

Abstract. *One of the main tasks of modern education is to form in students the knowledge and competencies applicable in different fields, to increase their interest in learning, to form and develop their cognitive motivation. The variety of applied teaching methods has a strong motivating potential in this respect, with an emphasis on interactive teaching methods in a digital environment. This article presents some pedagogical strategies for development of various cognitive skills for learners. Different methodological approaches to learning through the application of innovative educational tools are discussed. The advantages they offer in the learning process are pointed out. In the research we focus on pedagogical approaches, which create conditions for provoking students' thinking, for free expression of opinions and defense of one's own position, for provoking creative thinking rather than reproduction of information.*

Key words: pedagogical strategies, cognitive skills, cognitive strategies.
